Customer Name: Riya Thomas
Customer Email: riya.thomas@noviindus.com
Product: ParseFlow API v1.0
Subject: API returning 500 error on large PDF uploads

Issue Description:

Hi team,

I've been using ParseFlow for the past two weeks and it's been great for smaller files. However, I'm now trying to parse PDFs that are between 8-10 MB in size and I'm consistently getting a 500 Internal Server Error response with no useful error message in the body.

This is blocking our production rollout scheduled for next week. We have over 200 documents queued and cannot proceed. I've tried reducing file size but our documents cannot be split.

Steps to reproduce:

1. Upload any PDF larger than 7 MB via POST /api/v1/parse
2. Select document_type = invoice
3. Receive 500 error after approximately 30 seconds

Expected: Successful extraction or a clear error message with guidance.

Actual: 500 Internal Server Error with empty response body.

Please escalate this urgently. This is blocking a client delivery.
